Subject access to property located at 5006 Walnut

Larry -

I and Joe Ruiz of Weston along with their electrical subcontractor had the opportunity to meet with a ComEd rep earlier today regarding their ability to supply the DGSD property on Curtiss with a power line. Unfortunately, the ComEd rep didn't think that it would be easy to bring power to the property in the time frame we needed to work with. At the advice of Mr. Frank Furtak, we had the opportunity to visit another nearby DGSD property located at 5006 Walnut. The ComEd rep indicated that this particular property could easily be supplied with power and we all felt that the property met the needs and requirements of the project. The one requirement necessary to bring the line onto the property is to have a single electric pole be installed between the property and the ROW, and this is something that Weston's subcontractor could easily accomplish and later remove at the end of field activities.

Thank you for your continued support.
